

Feature:

1. FT-CE-VOL6 volume controller is a four-way volume controller with excellent audio modulation. By connecting with the host control system, it can realize the unique operation of left and right channel mute, volume, high and low bass lifting. Using DSP audio processing technology, it provides users with excellent sound quality
2. 6-way independent volume control, the volume of 6 audio channels can be adjusted to any size, and any 1 or more channels can be specified for synchronous control
3. It has the function of saving the power-off volume value, and the independent volume of 6 channels can be restored synchronously after power-on
4. When using the pull rod to control the volume, it has a nonlinear transformation of the pull rod, so that the volume adjustment of the pull rod conforms to the auditory habits of the human ear.
5. Panel indicator light to display the working status
6. Cooperate with the central control software to realize direct volume adjustment on the iPad
7. ID selection: Rotate the ID switch to set the network ID identity code
8. Dual-channel RS232 interface, support cascade control of multiple devices
9. Support balanced and unbalanced input and output connections at the same time

Specification:

Volume channel input impedance	10K Ω
Volume channel output impedance	5 Ω
Attenuation range	(0db) – (-79db)
Mute suppression	-120db
Frequency response	15Hz-20KHz (-3db minimum)
Total harmonic change	85db
Input/output interface	5P Phoenix connector, supporting both balanced and unbalanced connection
Communication method	RS232
Installation method	1U ear-hanging design, 19-inch standard cabinet installation
Power supply	AC110-220V
Equipment size	485mm*221mm*51mm
Equipment weight	2.5KG
