▶ Feature:

1. Auto-tracking camera controller

2. Auto-tracking: Automatically tracks the camera, allowing hands-free operation and focusing on the presenter or active speaker

3. Multiple tracking methods: It supports both traditional preset position tracking (where the camera moves to a predetermined position) and new IR-based tracking, which uses infrared signals for positioning and tracking

4. Seamless switching: The device can switch between different camera inputs without any interruption or black screen, ensuring a smooth transition between different camera views

5. Scaler switcher: The built-in 4x1 seamless scaler switcher allows combining and managing multiple video signals, possibly from different cameras or sources

6. Camera management: Multiple cameras can be managed simultaneously, providing comprehensive automatic camera setup for meetings or presentations

7. Additional features: Features like image freeze are also available, allowing for temporary pauses in the video feed
