

### Feature:

1. 2-inch color LCD smart display window, showing current voltage, date and time, and channel status in real time
2. 8 switch output channels, with adjustable delays for each channel (ranging from 0 to 999 seconds)
3. Each channel can be turned on and off independently or all at once
4. Panel lock function to prevent accidental operation
5. Built-in clock chip, allowing automatic power on and off according to date and time settings
6. Supports cascaded sequential control of multiple devices, with automatic detection and setting of cascade status.
7. RS232 interface supports external central control device control
7. One RJ45 interface supports network timing control
8. One 485 interface supports cascaded device control
9. Each device has its own device ID detection and configuration, enabling remote centralized control
10. Supports data storage and recall for 10 device switch scenarios, making scenario management simple and convenient
11. Supports undervoltage and overvoltage detection and alarms
13. 63A circuit breaker supports overload and short-circuit protection
