

### Feature:

1. FT-PWR0816 8-channel 16A intelligent lighting module, which can support up to 8 channels of 16A load, can be used with the central control, intelligently control the lights in the environment, detect the current current, and can be digitally displayed, so as to conveniently view the status of the current working circuit
2. Digital display
3. Communication address can be set
4. Fire linkage, forced start and forced cut can be set
5. Full open and full close delay can be set
6. Power-on mode can be set
7. Power-off memory function can be selected
8. Baud rate can be set
9. Factory settings can be restored
10. Remote centralized control and local control
11. Emergency manual control
12. Fire signal feedback
13. Background or panel scene setting
14. Background or panel load status display
15. Wireless control can be added (mobile phone, computer, PAD)
16. Current detection can be added
17. Standard rail installation

### Specification:

Working voltage	AC220V
Nominal current	16A
Output circuit	8
Power consumption	<5W
Communication mode	RS485 communication, NET communication protocol
Dimensions	162x104x66mm
