

Feature:

1. The power sequencer activates power sequentially from upstream devices to downstream devices. When power is turned off, it shuts down all devices sequentially from downstream to upstream. This effectively manages and controls all devices, preventing human error and minimizing the impact of power on the power grid during power-on and power-off cycles. This prevents induced currents from impacting devices, ensuring the stability of the entire power system
2. Standard 2U cabinet design with a black/silver brushed aluminum panel, user-friendly handles, and sophisticated craftsmanship for a premium look
3. Sixteen power-on control sockets, each with an AC220V (10A) output, for a total power socket capacity of 32KW
4. Sockets power on sequentially and shut off in reverse order, with a maximum power rating of 2000W per socket
5. 6.35 sockets support short-circuit control and can be connected to a timer or smart controller for automatic control
6. 16 power sockets power on sequentially with 1-second intervals
7. Features a power lock

Specification:

Power consumption	25W
Power supply	AC 220 ± 550-60Hz
Dimensions	88*482*390mm
Weight	7kg
