

Feature:

1. The IP Intercom and Broadcasting System Mobile Control App is an extension of the broadcasting system platform management software
2. The IP Intercom and Broadcasting System Mobile Control App is compatible with Android, Hongmeng, and Windows. This Android-based mobile app supports Android phones and tablets. It allows for remote paging, music playback, and voice broadcasting via mobile phones/tablets, as well as on-demand playback of songs and files from the broadcasting system platform's media library. Audio files can also be broadcast to designated terminals within the authorized range
3. The app utilizes adaptive mobile client device resolution, making it suitable for mobile control. Compared to traditional remote controls and computer clients, it significantly reduces latency. Minimizes direction, geographical, and spatial limitations, making operation more convenient and easy to use
4. Features real-time dynamic database connection with the Smart Cloud Broadcasting System control center, displaying device online status and enabling flexible broadcast control tasks, suitable for a variety of network-connected applications
5. Connects to the IP broadcast network for convenient mobile use
6. Select terminals for full-area, zoned, and point-to-point broadcasting
7. Supports on-demand playback of programs from the server media library
8. Supports on-demand playback of programs within the media library and direct broadcasting
9. Supports viewing terminal operating status
10. Supports viewing today's task list, allowing easy management of all scheduled tasks and their execution status
11. It supports the remote group calling function with intelligent audio terminals
